

Multivac Resale & Service:
expert, fast and reliable

MULTIVAC
RESALE & SERVICE

Multivac Resale & Service is the service center for the Multivac Group for overhauling packaging machines. We have more than 20 years of experience in this area.

Our particular expertise here is overhauling, retrofitting and rebuilding thermoformers, tray sealers and chamber machines as well as their components.

In our own production area and with our expertise, we guarantee high quality, great flexibility and the fastest delivery times for your projects:

- Retrofitting services
- Overhauling
- Second-hand machinery

We provide continuous training for our employees regarding the most up-to-date products and technology developments.

We provide expert advice for our customers and the consultation we offer always takes state-of-the-art technology into account.

Retrofitting services:

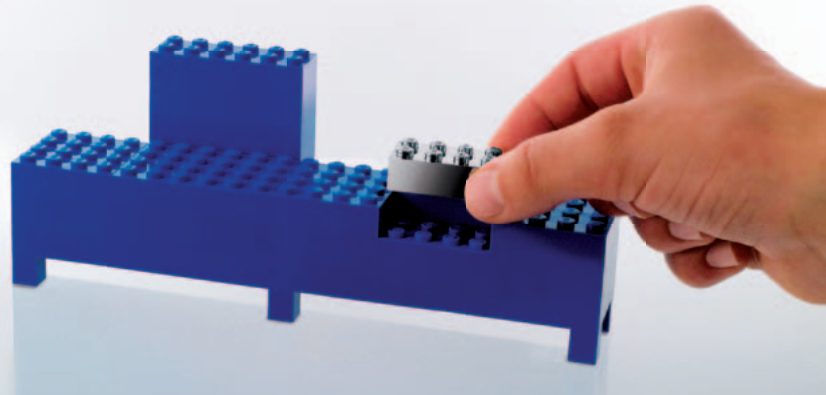

Keep abreast of the latest requirements

Your customers' demands are constantly changing. To meet their ever increasing expectations, you have to adapt your production quickly and efficiently. Multivac's retrofitting services include both hardware and software components and professional consultation. When you retrofit your machines, you also benefit from our newest technological developments.

Common reasons for retrofitting:

- Change in pack shape, depth, size or materials
- Extending the infeed or discharge area
- Expansion, including additional functions such as labeling, printing or automation
- Extending the film handling system
- Updating the control system

Multivac retrofitting includes a full guarantee and complete documentation, so customers can always understand and trace the services performed

Pack shape:

Changes in pack shape, depth, size or materials

Depending on your requirements, we can accommodate changes in pack form, depth, size or materials in a variety of ways. The spectrum ranges from simple insert plates for the form die, e.g. for brand labeling, to a completely new pack form or size.

Your contact person at Multivac will advise you on the selection of the optimum retrofitting solution to meet your requirements.

Extensions:

Extending the size and functionality of your Multivac

If your production volume increases and you have new requirements, maybe you need to extend the infeed or discharge area of your Multivac.

This could include simply lengthening the infeed area for automatic loading or extending the discharge area for labeling, printing, automation, etc.

Extending the film system:

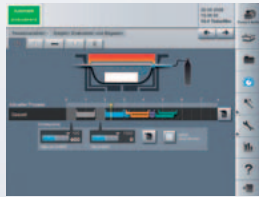

Maximum machine run time - minimal film waste

In production, time is valuable. Film change is one of the most common causes of production downtime. Systems such as the Jumbo film winder, extended scrap film holders or changeover systems can reduce the number of film roll changes per shift.

Updating the machine control system to the most recent technology

The continuous development of control technology provides many benefits that you can take advantage of in the operation of your Multivac. With their open architecture, the newest Multivac IPC control systems offer:

- Greater ease of use, with intuitive controls, easy-to-read touch screen, recipe memory and management, screen texts in 30 languages, etc.
- Validation of packaging processes and results
- Networking and transfer of associated production data to your company's organizational and data structure
- Synchronization of line elements positioned both before and after the packaging machine

Overhauling and updating your Multivac

Over many years of reliable production, your Multivac is subject to the normal wear process. And the market demands in your industry are also subject to change over the years.

Maybe you will decide to overhaul your Multivac to benefit from the newest packaging innovations and at the same time, your machine can be renovated with respect to technology. Such repairs and overhauling can be performed either at your location or in our service center.

Typical overhauling work includes

- Thorough cleaning
- Cabling new components with the control cubicle
- Installing new chains and gear wheels
- Overhauling or replacing motors and drives
- Renovating or replacing lifting units
- Replacing or recoating forming/sealing dies
- Complete testing when overhaul is finished

Of course, all repairs and overhauling work include a guarantee.

Please contact your Multivac representative for detailed information regarding specific overhauling measures to meet your needs.

Second-hand machinery

Multivac Resale & Service is your contact for high quality second-hand machines overhauled to factory specifications. These machines offer an excellent price/performance ratio.
